The Vocas MB-3 series matteboxes.

Matteboxes by definition, are designed for the rigors of broadcast news and demands of field production. Manufactured of molded carbon fibre and machined aluminium, these matteboxes combine precision engineering with simplicity and ease-of-use for professional internal focus lenses with a maximum front outside diameter of 105mm. The Quick-Lock mounting system attaches directly to the front lens barrel. For extra support, these matteboxes can be used on standard 15mm rails. These matteboxes accommodate 3X3" through 4x6" filters and work with most wide angle lenses in both 4:3 and 16:9 aspect ratios. For even more reduction of lens flare, the standard top flag and patented internal "eyebrows" are also included.

The **MB-315** has one rotating and one fixed 4"x4" filter frame.

The **MB-325** has two independently rotatable 4"x4" filter frames.

The **MB-350** can handle up to 4 filters, of which two are fully rotatable.
